

### **“New added corrosion protection for your firearms”**

**V-Line Industries** is excited to announce our partnership with the **Cortec Corporation** who is a global leader in corrosion protection solutions. Included FREE in your security case is an added benefit to help protect your valuables!

This case has been equipped with a Cortec VpCI-133 (Vapor phase Corrosion Inhibitor) foam square insert for corrosion protection. The insert foam square is designed with a vapor inhibitor impregnated throughout the foams matrix. This provides excellent protection of ferrous, non-ferrous metals and alloys such as: steel, copper, brass, aluminum, silver and other precious metals. The foam does not change critical physical or chemical properties of your items and is safe for firearms and electronics. Please note that the Cortec VpCI-133 foam is nitrite- and chromate- free and provides assisted corrosion protection against humidity, condensation, aggressive industrial atmospheres, dissimilar metal corrosion (galvanic corrosion), salt, and air for two (2) years once installed. The insert foam should be replaced every two years for continuous assistance in corrosion prevention.

**We recommended the Cortec pads be located anywhere on the inside wall of your case affixed to a section that will not interfere with the operation of the locking mechanism.**

To reorder new Cortec pads please contact V-Line by email or telephone listed below.
